

Liquid Release Agent
“Bubble Gum”

Benefits:

- **Cleaner:** Don't deal with the mess powders make when you can use a clear, non-staining, 100% evaporating Liquid Release Agent.
- **Faster:** Liquid Release leaves no residue and therefore requires no cleanup which saves you time.
- **Cheaper:** Since you do not need to pressure wash/acid wash the concrete, you can save 1-2 days in labor costs on cleanup alone.
- **Not a Dust hazard:** It is well known that breathing fine particulate powders is not the ideal way to keep your lungs clean, and we already have too many foul smelling chemicals to have need of another. Our Liquid Release agent is frequently called “Bubble Gum” due to the fact that it smells like Bubble Gum, a nice pleasant odor that makes it ideal for use on interior or enclosed areas where fumes can become overwhelming.
- **Easier:** Liquid Release agent is sprayed on in a fine mist just prior to placing the texture mats or skins. You need only spray as much area as you can stamp in 10-15 minutes (3-4 placements) due to the fast evaporation rate.
- **Clearly Better:** Since our Liquid Release agent has no color it does not antique. Antiquating is achieved by either colorwashing the surface using our special colorwashing formulas, or antique sealing using a small amount of release powder in a diluted sealer solution.

Coverage: 1,000-sq. ft. Per 5 gal Pail

Liquid Release Agent is Ideal for Stamped Overlays
